

ZIGZAG

Acoustic room divider

Design by: Synnöve Mork

Zigzag is a flexible and elegant sound absorber that improves sound and visual environment at the open space office or any open space in need of a good and healthy sound environment and divided areas.

Zigzag can either be used as a floor folding wall or hanging in wires as a room separator. You can have one standing for itself or several in a row.

The designer Synnevö Mork explains that the shape for zigzag came out of inspiration from folded paper. "I think hemp has a bit of paper directness while hemp has all the benefits needed to absorb sound. The structure of the material gives the room character and an architectural sharpness, a natural elegance, the environmental aspect is also a conscious choice."

Color: Natural hemp fiber, off white

Material: Hemp fiber

Size: 1000mm x 1600 mm

Negative carbon footprint.

Eco-friendly and nonallergic.
